

## Success history

Taushif Raza is a 9 yrs old Male child of Md. Taslim and Tabassum Ara, who diagnosed as Rickets with Bilateral Genu Valgum deformity . He has 2 brother and 1 sister. In December 2018 we found him in a door to door survey and we got aware about GRIRR Service and counselling with mother about the Rehabilitation service of GRIRR.

In the last week of December 2018 Endolite company had organized a free orthopedic camp in GRIRR supported by ISHWAR( International Society for Human Welfare And Rehabilitation) and they selected Taushif for corrective surgery .

His father works as labour and earns Rs 200/-month ,his family background is very poor as they are 6 people staying in one small room . They didn't take any treatment as they cannot afford the cost .

In January 2019 he underwent corrected surgery by ISHWAR followed by PHYSIOTHERAPY & Orthosis management .

Now the deformity has been corrected 99% and as per his mother, she was very happy and said “ before he wasn't not able to do prayer as he was not able to fold the Legs which was also very difficult for him to use the toilet.

But now he is using the toilet without any difficulty and he even prays everyday.
