

How  
GRIRR  
helped give  
Yusra and  
Zaira new  
lives

*Garden Reach Institute for  
Research and Rehabilitation*

Yusra faced  
development  
challenges at 18  
months.

Her bones  
were brittle;  
she suffered  
delayed speech  
milestones; she  
could not stand or  
walk properly.

Yusra's sister Zaira also faced communication and socialization challenges, requiring speech therapy and special education.

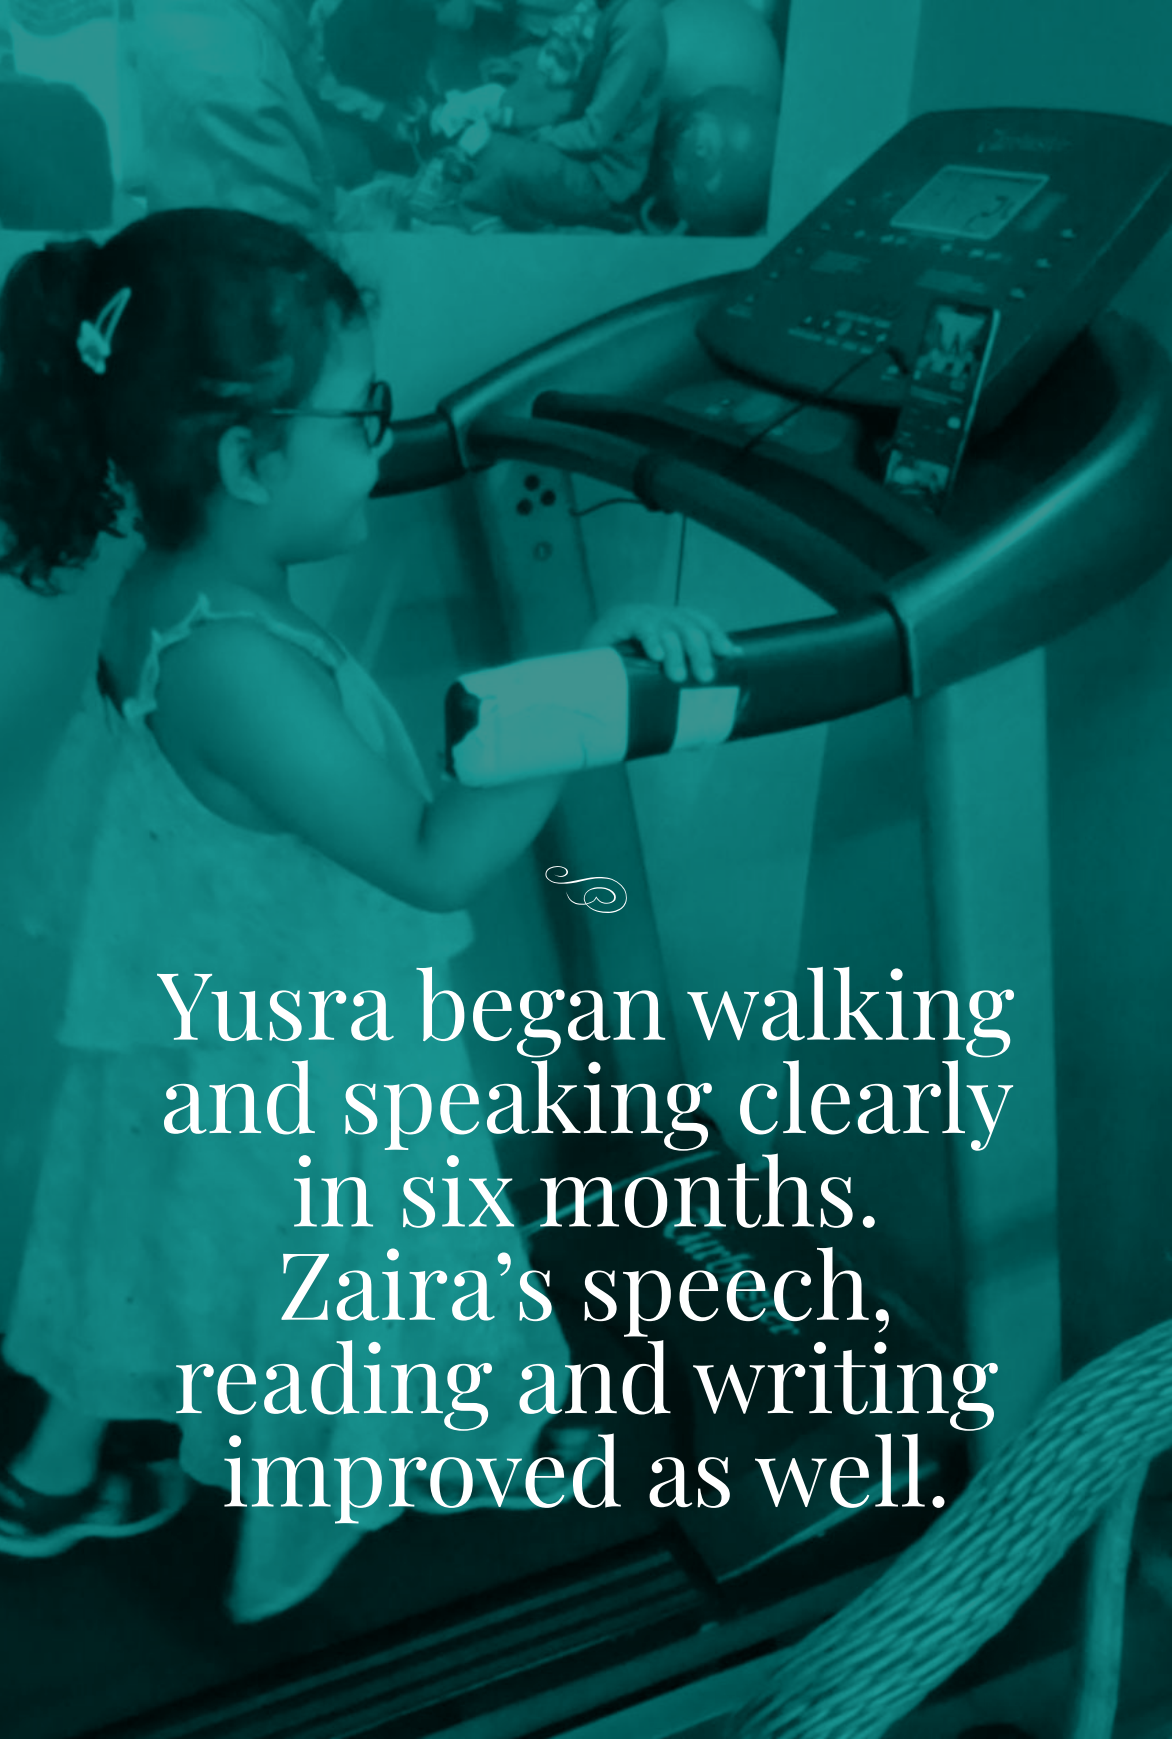

Her mother sought specialised medical advice.

The doctor was considerate; he recommended GRIRR for physiotherapy.

The mother  
took Yusra  
and Zaira for  
two-hour  
physiotherapy  
and education  
sessions...every  
single day.

Yusra began walking  
and speaking clearly  
in six months.  
Zaira's speech,  
reading and writing  
improved as well.

The grateful  
parents say:  
'Sab GRIRR ki  
badaulat.'
